## HIGHLIGHTS

Delégo Server 2.9 is designed for the system integrator. Every new feature has one goal: to make the work of those who design and commission a system simpler, faster and safer.

The administration has been redesigned from scratch, so even people who do not know Delégo yet find a clear interface, consistent with Ekinex Studio. The Matter controller supports new device families, all project data is safe in the Ekinex cloud, and the list of compatible PMS and channel managers keeps growing.

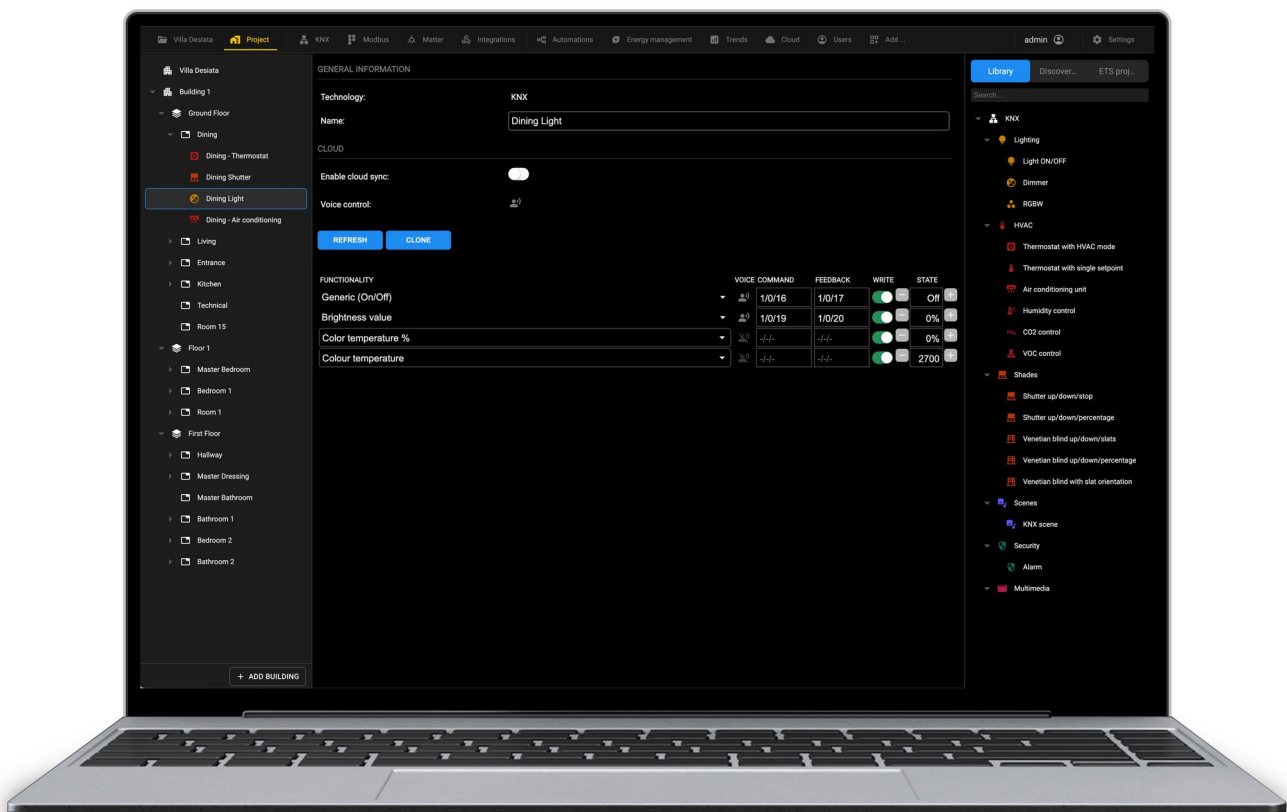

- 1 **NEW ADMINISTRATION**
- 2 **NEW MATTER DEVICES**
- 3 **ALL DATA SAFE IN THE CLOUD**
- 4 **PMS AND CHANNEL MANAGER INTEGRATION**

# 1 NEW ADMINISTRATION

The administration area of Delégo Server has been redesigned from scratch with a clear goal: to make the first half hour on a new system easy.

All sections sit in one bar at the top, and every page has the same layout: the project on the left, the configuration in the centre, the object library on the right. KNX, Modbus, Matter, MQTT and the other integrations follow the same pattern. Once you learn one section, you can use them all.

The menu adapts to the system: you turn on only the technologies you really use, and the others disappear from view. The look is the same as Ekinex Studio, so if you know one of the two products, you feel at home in the other.

## 2 NEW MATTER DEVICES

The Matter controller of Delégo Server widens the range of devices you can add to the system. This version adds:

- temperature and humidity sensors
- water leak sensors
- air quality sensors, with PM2.5 and PM10 particulate matter
- smoke and carbon monoxide detectors

You can update and remove nodes directly from the new interface, with no external tools.

**SENSORS IN THE DELÉGO APP**  
temperature, humidity, air quality, leaks and smoke

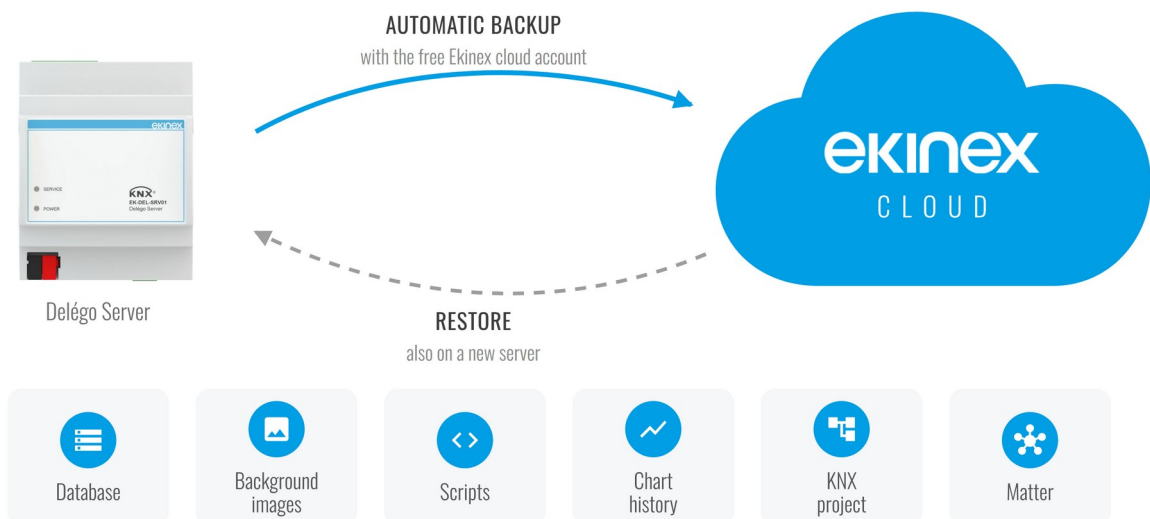

**THE ALARM REACHES YOUR PHONE**  
push notification as soon as a sensor detects a problem

### 3 ALL DATA SAFE IN THE CLOUD

From this version, all project data is safe in the Ekinex cloud. The backup is no longer limited to the database. It also includes:

- the background images of the visualisation
- custom scripts
- the history of the data collected for charts
- the KNX project imported from ETS
- the Matter controller and bridge settings

Just link the server to your Ekinex cloud account, which is free, and all this data is backed up automatically. If a server fails or must be replaced, you restore the project from the cloud and put it back into service on the new device.

## 4

## PMS AND CHANNEL MANAGER INTEGRATION

Delégo Server keeps growing the list of hotel management systems (PMS) and channel managers it works with. Bookings, check-ins and check-outs reach Delégo, so nobody has to enter the same data twice.

For the system integrator, this means you can offer Delégo to every kind of accommodation, from large hotels to short-term rental apartments, while the customer keeps the software they already use.

## PROPERTY MANAGEMENT SYSTEM

Oracle OPERA

protel

Zucchetti 5stelle

Zucchetti Beddy

Guesty

## CHANNEL MANAGER

Smoobu

WuBook

Smartness

The updated list of integrations is available at [ekinex.com](https://ekinex.com).
